OVERVIEW

Accessories are the small items that close, adapt and carry a carbon steel line once the main pipe and fittings are in: caps and plugs seal open ends and test points, bushings step a threaded connection down a size, and supports, clamps and hangers hold the line to structure at the right spacing. They are consumed steadily through construction and again during maintenance shutdowns.

Al Safsaaf supplies carbon steel pipe accessories, including caps, bushings and supports, from local Saudi and GCC approved brands, for pipe finishing, industrial maintenance and construction work.

For a quotation, list each item type with pipe size, end connection (threaded, socket weld or butt weld), material grade and finish (black or galvanised), and for supports the pipe size, load and whether insulation or rubber lining must be accommodated. Grouping accessories with the pipe and fittings order avoids mixed grades at the joint and keeps site deliveries simple.
